

KLINGERSIL[®] C-4500 – superior-performance gasket material designed especially for the chemical industry.

Combining carbon fibers and special heat-resistant additives with an NBR bonding, this superior-performance gasket material has been designed specifically for the chemical industry. Higher temperatures, alkaline media and superheated steam are typical application scenarios where operators also profit from its resistance against oils, gases, salt solutions, fuels, alcohols, moderate organic and inorganic acids, hydrocarbons, lubricants and refrigerants.

Basis composition	Carbon fibers and special heat- resistant additives bonded with NBR.
Color	Black
Certificates	Oxygen-tested, DIN-DVGW, DIN 16421 (W 270), ÖVGW, TA-Luft (Clean air), DNV approval, Fire-Safe acc. to DIN EN ISO 10497

Sheet size	1000 x 1500 mm, 2000 x 1500 mm
Thickness	0.5 mm, 1.0 mm, 1.5 mm, 2.0 mm, 3.0 mm
Tolerances	:
	according to DIN 28091-1

Tightness performance

The tightness performance graph

The graph shows the required stress at assembling to seal a certain tightness class. The determination of the graph is based on EN13555 test procedure which applies 40 bar Helium at room temperature. The sloping curve indicates the ability of the gasket to increase tightness with raising gasket stress.

Chemical resistance chart

Simplified overview of the chemical resistance depending on the most important groups of raw materials:

All information is based on years of experience in production and operation of sealing elements. However, in view of the wide variety of possible installation and operating conditions one cannot draw final conclusions in all application cases regarding the behaviour in gasket joint. The data may not, therefore, be used to support any warranty claims. This edition cancels all previous issues. Subject to change without notice.
